

Digital Vision Board Template

A focused collection of references for the feeling, palette, materials, and key decisions of one room.

A useful vision board is not a collage of everything you like. Choose a small number of images that agree on the room's feeling and help you make real decisions.

BUILD THE BOARD

- Choose one anchor image that captures the room's overall feeling.
- Add two or three supporting room images - not twenty.
- Add separate images for color, furniture shape, lighting, textile, art, and one personal detail.
- Label what you like in each image so you do not accidentally copy what you dislike.
- Remove any image that introduces a conflicting direction without a clear purpose.
